Please find the original document at [https://launchpad.support.sap.com/#/notes/ 2691984](https://launchpad.support.sap.com/#/notes/2691984)

Symptom

A user running a Web Dynpro application gets an error page telling "500 Internal Server Error" without any additional information.

Now you want to analyze the problem.

Reason and Prerequisites

Missing information.

Solution

Check the authorization trace if the user ran into an authorization problem.

Check transaction ST22 for an entry belonging to the dump.

Change the server parameter "is/HTTP/show_detailed_errors" to "TRUE" in transaction RZ11.

Reproduce the problem. Now you see the detailed error and the call stack and you can analyze it or send it to SAP.

Change the parameter back to "FALSE".
